My high-throughput experiment generated a long list of genes/proteins...

What do I do now?

Pathway analysis! (a.k.a. geneset enrichment)

Use bioinformatics methods to help extract biological meaning from such lists...

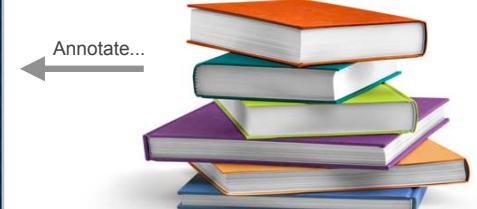

Basic idea

Differentially Expressed Genes (DEGs)

Gene-sets (Pathways, annotations, etc...)

Annotate...

Differentially Expressed Genes (DEGs)

Overlap...

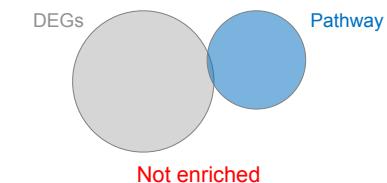

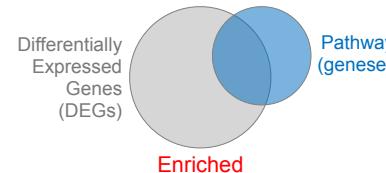

Pathway analysis (a.k.a. geneset enrichment) Limitations

- Geneset annotation bias:** can only discover what is already known
- Non-model organisms:** no high-quality genesets available
- Post-transcriptional regulation** is neglected
- Tissue-specific** variations of pathways are not annotated
 - e.g. NF-κB regulates metabolism, not inflammation, in adipocytes
- Size bias:** stats are influenced by the size of the pathway
 - Many pathways/receptors **converge** to few regulators
 - e.g. Tens of innate immune receptors activate four TFs: NF-κB, AP-1, IRF3/7, NFAT

Side-note:

Pathway analysis (a.k.a. geneset enrichment) Principle

• DEGs come from your experiment

> Critical, needs to be as clean as possible

• Pathway genes ("geneset") come from annotations

> Important, but typically not a competitive advantage

• Variations of the math: overlap, ranking, networks... > Not critical, different algorithms show similar performances

Starting point for pathway analysis: Your gene list

- You have a list of genes/proteins of interest
- You have quantitative data for each gene/protein
 - Fold change
 - p-value
 - Spectral counts
 - Presence/absence

Translating between identifiers

- Many different identifiers exist for genes and proteins, e.g. UniProt, Entrez, etc.
- Often you will have to translate one set of ids into another
 - A program might only accept certain types of ids
 - You might have a list of genes with one type of id and info for genes with another type of id

Translating between identifiers

- Many different identifiers exist for genes and proteins, e.g. UniProt, Entrez, etc.
- Often you will have to translate one set of ids into another
 - A program might only accept certain types of ids
 - You might have a list of genes with one type of id and info for genes with another type of id
- **Various web sites translate ids -> best for small lists**
 - UniProt <www.uniprot.org>; IDConverter <idconverter.bioinfo.cnio.es>

Translating between identifiers: UniProt <www.uniprot.org>

The screenshot shows the UniProt homepage. At the top, there is a search bar with dropdown menus for 'Search in' (set to 'Protein Knowledgebase (UniProtKB)') and 'Query'. Below the search bar are buttons for 'Search', 'Clear', 'Fields', 'Blast', 'Align', 'Retrieve', and 'ID Mapping'. The 'ID Mapping' button is highlighted with a red box. The main area is titled 'WELCOME' and 'NEWS'. Below this, there is a form for 'Identifiers' mapping. It has two dropdown menus: 'From' (set to 'EMBL/GenBank/DDBJ') and 'To' (set to 'UniProtKB AC'). There is also a file upload field labeled 'Choose File' with the placeholder 'no file selected'. To the right of the dropdowns are three buttons: 'Map', 'Swap', and 'Clear'.

Translating between identifiers

- Many different identifiers exist for genes and proteins, e.g. UniProt, Entrez, etc.
- Often you will have to translate one set of ids into another
 - A program might only accept certain types of ids
 - You might have a list of genes with one type of id and info for genes with another type of id
- Various web sites translate ids -> *best for small lists*
 - UniProt <www.uniprot.org>; IDConverter <idconverter.bioinfo.cnio.es>
- **VLOOKUP in Excel - good if you are an excel whizz - I am not!**
 - Download flat file from Entrez, Uniprot, etc; Open in Excel; Find columns that correspond to the 2 IDs you want to convert between; Sort by ID; Use vlookup to translate your list

Translating between identifiers: Excel VLOOKUP

VLOOKUP(lookup_value, table_array, col_index_num)

Translating between identifiers

- Many different identifiers exist for genes and proteins, e.g. UniProt, Entrez, etc.
- Often you will have to translate one set of ids into another
 - A program might only accept certain types of ids
 - You might have a list of genes with one type of id and info for genes with another type of id
- Various web sites translate ids -> best for small lists
 - UniProt < www.uniprot.org; IDConverter < idconverter.bioinfo.cnio.es >
- VLOOKUP in Excel -> good if you are an excel whizz - I am not!
 - Download flat file from Entrez, Uniprot, etc; Open in Excel; Find columns that correspond to the two ids you want to convert between; Use vlookup to translate your list
- Use the **merge()** or **mapIDs()** functions in R - fast, versatile & reproducible!
 - Also **clusterProfiler::bitr()** function and many others... [Link to [clusterProfiler vignette](#)]

Reminder

2. class-material (bash)

```
# Using the merge() function
> anno <- read.csv("data/annotables_grch38.csv") This is an annotation file

> mygenes$symbol <- merge(mygenes, anno, by.x="row.names", by.y= "ensgene")
This is our differential expressed genes
```

Reminder

2. class-material (bash)

```
# Using the merge() function
> anno <- read.csv("data/annotables_grch38.csv")

> merge(mygenes, anno, by.x="row.names", by.y= "ensgene")

# Using mapIDs() function from bioconductor
> library("AnnotationDbi")
> library("org.Hs.eg.db") Load the required Bioconductor packages

> mygenes$symbol <- mapIDs( org.Hs.eg.db,
  column="SYMBOL",
  keys=row.names(mygenes),
  keytype="ENSEMBL" ) Annotation we want to add
                                         Our vector of gene names & their format
```

bitr: Biological Id Translator

clusterProfiler provides `bitr` and `bitr_kegg` for converting ID types. Both `bitr` and `bitr_kegg` support many species including model and many non-model organisms.

```
x <- c("GPX3", "GLRX", "LBP", "CRYAB", "DEFB1", "HCLS1", "SOD2", "HSPA2",  
      "ORM1", "IGFBP1", "PTHLH", "GPC3", "IGFBP3", "T0B1", "MITF", "NDRG1",  
      "NR1H4", "FGFR3", "PVR", "IL6", "PTPRM", "ERBB2", "NID2", "LAMB1",  
      "COMP", "PLS3", "MCAM", "SPP1", "LAMC1", "COL4A2", "COL4A1", "MYOC",  
      "ANXA4", "TFPI2", "CST6", "SLPI", "TIMP2", "CPM", "GGT1", "NNMT",  
      "MAL", "EEF1A2", "HGD", "TCN2", "CDA", "PCCA", "CRYM", "PDXK",  
      "STC1", "WARS", "HMOX1", "FXYD2", "RBP4", "SLC6A12", "KDELR3", "ITM2B")  
eg = bitr(x, fromType="SYMBOL", toType="ENTREZID", OrgDb="org.Hs.eg.db")  
head(eg)
```

```
## SYMBOL ENTREZID  
## 1 GPX3 2878  
## 2 GLRX 2745  
## 3 LBP 3929  
## 4 CRYAB 1410  
## 5 DEFB1 1672  
## 6 HCLS1 3059
```

See package vignette:

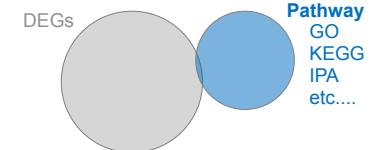

<https://bioconductor.org/packages/release/bioc/html/clusterProfiler.html>

Alternative...

What functional set databases do you want?

- Most commonly used:

- **Gene Ontology (GO)**
- **KEGG Pathways** (mostly metabolic)
- **GeneGO MetaBase** 
- **Ingenuity Pathway Analysis (IPA)** 

- Many others...

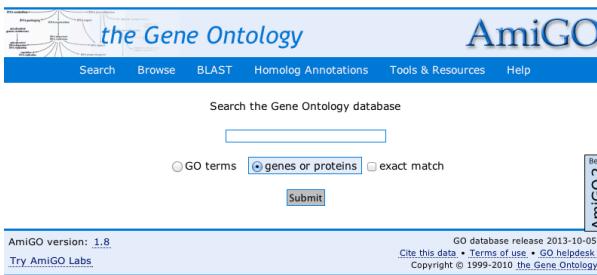

- **Enzyme Classification, PFAM, Reactome,**
- Disease Ontology, MSigDB, Chemical Entities of Biological Interest, Network of Cancer Genes etc...
- See: Open Biomedical Ontologies (www.obofoundry.org)

GO < www.geneontology.org >

- What function does HSF1 perform?
 - response to heat; sequence-specific DNA binding; transcription; etc
- **Ontology** => a structured and controlled vocabulary that allows us to annotate gene products consistently, interpret the relationships among annotations, and can easily be *handled by a computer*
- GO database consists of 3 ontologies that describe gene products in terms of their associated **biological processes**, **cellular components** and **molecular functions**

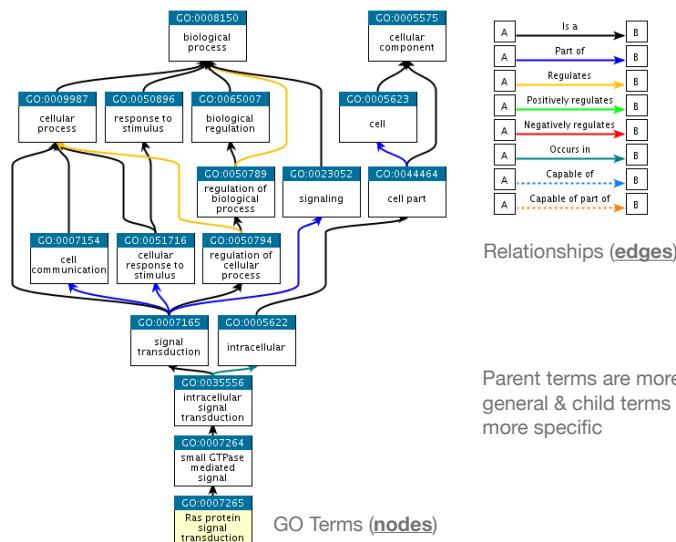

GO Annotations

- GO is not a stand-alone database of genes/proteins or sequences
- Rather gene products get annotated with **GO terms** by UniProt and other organism specific databases, such as Flybase, Wormbase, MGI, ZFIN, etc.
- Annotations are available through AmiGO < amigo.geneontology.org >

The screenshot shows the AmiGO web interface. At the top, there's a navigation bar with links for 'Search', 'Browse', 'BLAST', 'Homolog Annotations', 'Tools & Resources', and 'Help'. Below the navigation bar is a search bar labeled 'Search the Gene Ontology database'. Underneath the search bar are three radio buttons: 'GO terms' (selected), 'genes or proteins', and 'exact match'. A 'Submit' button is located below the search bar. At the bottom of the page, there's footer information including 'AmiGO version: 1.8', 'GO database release 2013-10-05', 'Try AmiGO Labs', 'Cite this data', 'Terms of use', 'GO Helpdesk', 'Copyright © 1999-2010 the Gene Ontology', and a 'Beta' badge.

GO is structured as a “directed graph”

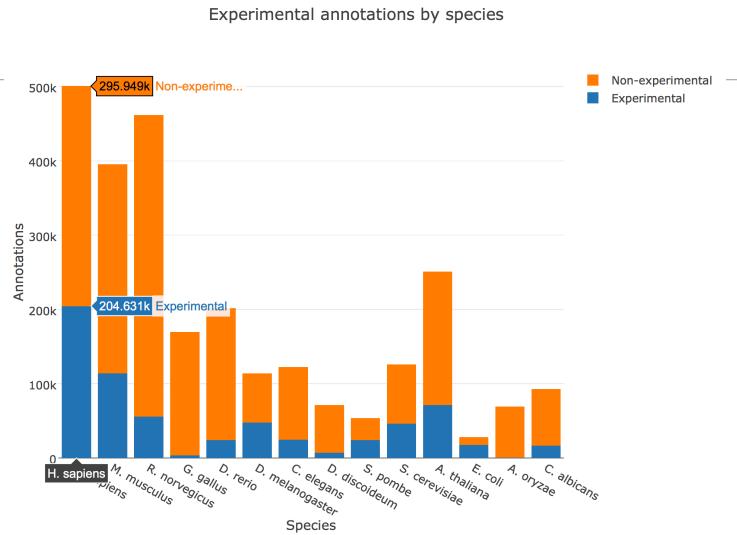

Parent terms are more general & child terms more specific

Evidence code	Evidence code description	Source of evidence	Manually checked	Current number of annotations*
IDA	Inferred from direct assay	Experimental	Yes	71,050
IEP	Inferred from expression pattern	Experimental	Yes	4,598
IGI	Inferred from genetic interaction	Experimental	Yes	8,311
IMP	Inferred from mutant phenotype	Experimental	Yes	61,549
IPI	Inferred from physical interaction	Experimental	Yes	17,043
ISS	Inferred from sequence or structural similarity	Computational	Yes	196,643
RCA	Inferred from reviewed computational analysis	Computational	Yes	103,792
IGC	Inferred from genomic context	Computational	Yes	4
IEA	Inferred from electronic annotation	Computational	No	15,687,382
IC	Inferred by curator	Indirectly derived from experimental or computational evidence made by a curator	Yes	5,167
TAS	Traceable author statement	Indirectly derived from experimental or computational evidence made by the author of the published article	Yes	44,564
NAS	Non-traceable author statement	No 'source of evidence' statement given	Yes	25,656
ND	No biological data available	No information available	Yes	132,192
NR	Not recorded	Unknown	Yes	1,185

*October 2007 release

Can now do gene list analysis with GeneGO online!

- See AmiGO for details: http://amigo.geneontology.org/amigo/base_statistics

Gene List Analysis Browse Sequence Search cSNP Scoring Keyword Search

Please refer to our article in [Nature Protocols](#) for detailed instructions on how to use this page.

Error parsing request, no input specified

Help Tips

Steps:

1. Select list and list type to analyze
2. Select Organism
3. Select operation

1. Enter IDs or select file for batch upload. Else enter ids or select file or list from workspace for comparing to a reference list.

Enter IDs: no file selected

separate IDs by a space or comma

Upload IDs: [File format](#)

2. Select organism.

Home sapiens
Mus musculus
Rattus norvegicus
Gallus gallus
Danio rerio

3. Select analysis.

Functional classification viewed in gene list

Another popular online tool: **DAVID** at NIAID < david.abcc.ncifcrf.gov >

The screenshot shows the DAVID Analysis Wizard interface. At the top, there's a navigation bar with links like Home, Start Analysis, Shortcut to DAVID Tools, Technical Center, Downloads & APIs, Term of Service, Why DAVID?, and About Us. Below the navigation bar, there's a section titled "Analysis Wizard" with the subtitle "DAVID Bioinformatics Resources 2008, NIAID/NIH". The main area is titled "Analysis Wizard" and contains four steps:

- Step 1: Enter Gene List**: A text input field with a "Clear" button. A note says: "Note: Affy Exon IDs and Affy Gene Array IDs are now supported in DAVID, as *affy_id* type." An example list is provided: 1007_s_at, 1008_s_at, 117_at, 121_at, 1255_g_at, 1316_at, 1320_at, 1431_at, 1438_at, 1487_at, 1494_f_at, 1598_g_at.
- Step 2: Select Identifier**: A dropdown menu set to "AFFY_ID".
- Step 3: List Type**: Radio buttons for "Gene List" and "Background".
- Step 4: Submit List**: A "Submit List" button.

DAVID

- Functional Annotation Chart

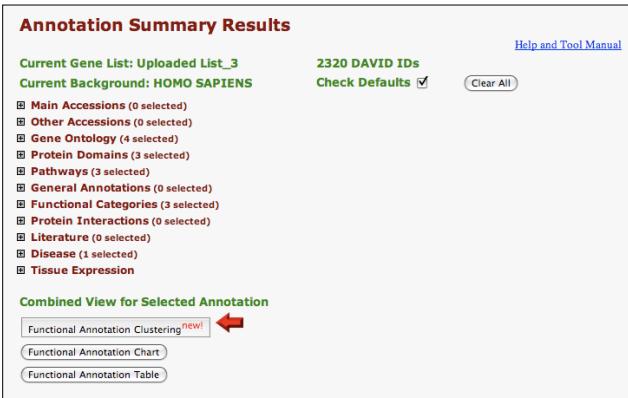

Systematic and integrative analysis of large gene lists using DAVID bioinformatics resources
Da Wei Huang, Brad T Sherman & Richard A Lempicki
Nature Protocols 4, 44 - 57 (2009)

Overlapping functional sets

- Many functional sets overlap
 - In particular those from databases that are hierarchical in nature (e.g. GO)
- Hierarchy enables:
 - Annotation flexibility (e.g. allow different degrees of annotation completeness based on what is known)
 - Computational methods to “understand” function relationships (e.g. ATPase function is a subset of enzyme function)
- Unfortunately, this also makes functional profiling trickier
 - Clustering of functional sets can be helpful in these cases

DAVID

- DAVID now offers functional annotation clustering:

DAVID Functional Annotation Clustering

- Based on shared genes between functional sets

Functional Annotation Clustering

Current Gene List: Uploaded List_3
2320 DAVID IDs

Options Classification Stringency: Medium

Annotation Cluster 1 Enrichment Score: 3.72 G Count P_Value Benjamin

GOTERM_BP_5	regulation of transcription from RNA polymerase II promoter	RT	83	3.7E-5	2.4E-2
GOTERM_BP_5	polymerase II promoter	RT	61	1.5E-4	3.8E-2
GOTERM_BP_5	polymerase II promoter of nucleic acid nucleoside, nucleotide and nucleic acid metabolic process	RT	72	1.7E-4	3.8E-2
GOTERM_BP_5	positive regulation of cellular metabolic process	RT	58	3.8E-4	5.0E-2
GOTERM_BP_5	positive regulation of transcription, DNA-dependent	RT	48	7.4E-4	7.6E-2

Annotation Cluster 2 Enrichment Score: 3.54 O Count P_Value Benjamin

GOTERM_BP_5	regulation of cell size	RT	41	1.2E-4	3.9E-2
GOTERM_BP_5	regulation of cell growth	RT	33	3.7E-4	5.1E-2
GOTERM_BP_5	cell morphogenesis	RT	81	5.2E-4	5.7E-2

Annotation Cluster 3 Enrichment Score: 3.37 G Count P_Value Benjamin

GOTERM_BP_5	apoptosis	RT	131	1.6E-6	2.1E-3
GOTERM_BP_5	cell death	RT	136	3.8E-6	3.3E-3
GOTERM_BP_5	regulation of programmed cell death	RT	88	3.2E-4	5.8E-2
GOTERM_BP_5	positive regulation of apoptosis	RT	48	3.3E-4	5.6E-2
GOTERM_BP_5	regulation of apoptosis	RT	87	3.5E-4	5.2E-2
GOTERM_BP_5	positive regulation of programmed cell death	RT	48	4.0E-4	5.0E-2

Want more?

- GeneGO** < portal.genego.com >
 - MD/PhD curated annotations, great for certain domains (eg, Cystic Fibrosis)
 - Nice network analysis tools
 - Email us for access
- Oncomine** < www.oncomine.org >
 - Extensive cancer related expression datasets
 - Nice concept analysis tools
 - Research edition is free for academics, Premium edition \$\$\$
- Lots and lots other R/Bioconductor packages in this area!!!**

counts + metadata

1 countData

gene	ctrl_1	ctrl_2	exp_1	exp_2
geneA	10	11	56	45
geneB	0	0	128	54
geneC	42	41	59	41
geneD	103	122	1	23
geneE	10	23	14	56
geneF	0	1	2	0
...

countData is the count matrix
(Number of reads coming from each gene for each sample)

N.B. First column of colData must match column names (i.e. sample names) of countData (-1st)

2 colData

id	treatment	sex	...
ctrl_1	control	male	...
ctrl_2	control	female	...
exp_1	treated	male	...
exp_2	treated	female	...

colData describes metadata about the columns of countData

Pathways vs Networks

EGFR-centered Pathway

- Detailed, high-confidence consensus
- Biochemical reactions
- Small-scale, fewer genes
- Concentrated from decades of literature

EGFR-centered Network

- Simplified cellular logic, noisy
- Abstractions: directed, undirected
- Large-scale, genome-wide
- Constructed from omics data integration

Next Class

Goal

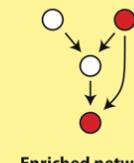

1 Enrichment of fixed gene sets

Identification of pre-built pathways or networks that are enriched in a set of mutated or differentially expressed genes

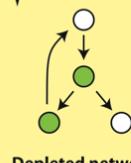

2 De novo sub-network construction and clustering

Construction of specific sub-networks from the set of mutated or differentially expressed genes to identify an extended list of putative cancer genes

Output

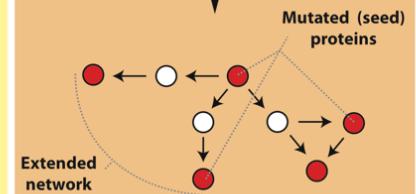

Enriched network

Depleted network

Next Class

...

Extended network

Goal

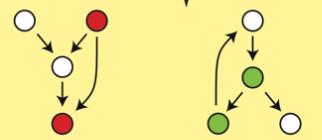

1 Enrichment of fixed gene sets

Identification of pre-built pathways or networks that are enriched in a set of mutated or differentially expressed genes

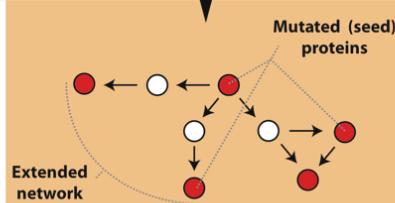

2 De novo sub-network construction and clustering

Construction of specific sub-networks from the set of mutated or differentially expressed genes to identify an extended list of putative cancer genes

Output

What biological process is altered in this cancer?

Are NEW pathways altered in this cancer? Are there clinically relevant tumor subtypes?

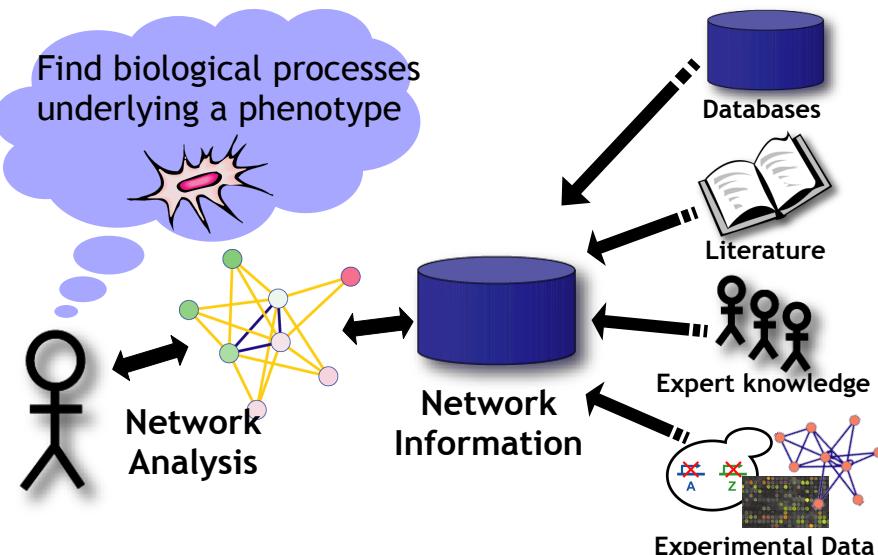

Next Class

Side-note:

Pathway analysis (a.k.a. geneset enrichment) Limitations

- **Geneset annotation bias:** can only discover what is already known
- **Non-model organisms:** no high-quality genesets available
- **Post-transcriptional regulation** is neglected
- **Tissue-specific** variations of pathways are not annotated
 - e.g. NF- κ B regulates metabolism, not inflammation, in adipocytes
- **Size bias:** stats are influenced by the size of the pathway
 - Many pathways/receptors **converge** to few regulators
e.g. Tens of innate immune receptors activate four TFs:
NF- κ B, AP-1, IRF3/7, NFAT

Pathway & Network Analysis Overview
